* consists of 12 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.

* 6527 6626; gap of unknown length
* 6627 18812; contig of 6526 bp in length
* 6627 18812; contig of 12186 bp in length
* 61781 61780; contig of 12186 bp in length
* 61781 61780; contig of 1288 bp in length
* 61881 97068; contig of 1288 bp in length
* 61782 125206; contig of 28038 bp in length
* 125207 125206; gap of unknown length
* 125307 127021; contig of 1715 bp in length
* 127122 122387; contig of 2815 bp in length
* 127122 122387; contig of 2815 bp in length

                                                                                                                                                                                                                          The present invention describes mucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy. For polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA77721 and AAB24188 to AAB24435 represent mucleotide and protein sequences used in the exemplification of the

                                           The present invention describes an antibody that binds to a human protein (I) selected from: PRO381, PRO1269; PRO1101, PRO1755, PRO1780; PRO3434; PRO1927; PRO1567, PRO1956; PRO1293; PRO1936; PRO4344; PRO4934; PRO4927; PRO1956; PRO1096; PRO1036; PRO49497; PRO4957; PRO1565; PRO1096; PRO2038; and PRO2262. (I) has anticancer activity and can be used to diagnose tumours in mammals, by detecting complex formation when the antibody is contacted with test cells. Complex formation when the antibody is contacted with test cells. Complex formation when the antibody is contacted which hybridises to genes the antibodies, or an antisense oligomucleotide which hybridises to genes encoding (I). Can be used to inhibit tumour growth, preferably by inducing (I). Can be used to inhibit the present invention can be used to inducing cell death. Methods from the present invention and be used to inducing cell death. Methods from the present invention probes used in to AAC5812 and AAB24021 to AAB24040 represent human PRO polymocleotide and AACS812 and AAB24021 to AAB24040 represent human PRO polymocleotide and protein sequences given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           099

receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA31145 to AAA3730 represent PCR primers and hybridisation probes used in the isolation of the PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                       New mammalian DNA sequences encoding transmembrane, receptor or secreted PRO polypeptides, useful for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CAAGCAGGTCATCCCCTTGGTGACCTTCAAAGAGAAGCAGAGGGGGCAGAGGTGGGGGGG

The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. They may also be used used used either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nuclacids may also be used in gene therapy

The sequences are useful in the preparation of a dedicament for treating a condition responsive to a PRO polypeptide. The polypeptides are useful in a number of functional biological assays, as molecular weight markers for protein electrophoresis and as therapeutic 9 9 TGCCTCAACCTCTCCATCGTCTCCCATGCCACTGCCATGGTGTATCCCGGGAGAATC CCCIGIGGACAAGAIGGCAICCCTGGAGICIACAACTAIATITGCAAGTATGTGGACTGG ACCAGCACCGTTCAACCCCTGCCCTGCCCAATGACTGTGCAACCGCTGGCACCGAGTGC CACGICICAGGCIGGGGCATCACCAACCACGGAACCCAITCCCGGAICIGCICCAG TGCCTCAACCTCTCCATCGTCTCCCATGCCACGTGCTGTGTGTTGTATCCCGGGAGAATC GGGGGCCCCTGGTGTGTGGGGGAGTCCTTCAAGGTCTGGTGTCCTGGGGGTCTTGTGGGG GCCTCGACGAGCCACGACGACGACGCTCCGGCTGCGGCTGCGCCTGCCGTCCGCGTA GCTCACTGCAGCGGCAGCTACTGGGTGCGCCTGGGGGAACACAGCCTCAGCCTC GACTGGACCGAGCAGATCCGGCACAGCGGCTTCTCTGTGACCCCATCCCGGCTACCTGGGA ATGGGGCTCAGCATCTTTTGCTCCTGTGTGTTCTTGGGCTCAGCCAGGCAGCACCG AIGGGGCTCAGCAITTTTGCTCCTGTGTGTTTTTGGCTCAGCCAGGCAGCCAACCG AAGATTTTCAATGGCACTGAGTGTGGGCGTAACTCACAGCCGTGGCAGGTGGGGGCTTTT GAGGGCACCAGCCTGCGCTGCGGGGGTGTCCTTATTGACCACAGGTGGGTCCTCACAGGC GAGGGCACCAGCCTGCTGCGGGGGGTGTCCTTATTGACCACAGGTGGGTCCTCACAGGG 61 ACAGGGAAAGGGTGACCTCTGAGATTCCCCTTTTCCCCCAGACTTTGGAAGTGACCCACC CAAGCAGGTCATCCCCTTGGTGACCTTCAAAGAGAAGCAGAGAGGGCAAAGGTGGGGGGGC useful in Novel isolated PRO polypeptides e.g. PRO1491 and PRO1571, useful in preparation of a medicament for treating a condition responsive to polypeptide, and as therapeutic agents e.g. vaccines. 0; Length 1091; Ouery Match

Novel isolated PRO polypeptides e.g., PRO1130, PRO1275, PRO1418, PRO1555, PRO1787 affect glucose or free fatty acid (FFA) uptake by skeletal muscle cells and are useful for treating diabetes or hyper- or hypo-insulinemia.

The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized fundus library oDNA Library Preparation: M.B.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EST 23-DEC-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   807
               double-stranded cDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT7T3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatima Bonaldo. RNA was kindly provided by Dr. Minoru Ko (Wayne State University)."
